ABS... Beyond Bulls

New ABS Sires

Spring 2010

MVE®

True Classics never fade away...

...They just get *better* and *better*.

ABS and MVE... Time-tested for reliability and longevity. You need more than just reliable genetics, you need a reliable home for them. ABS and MVE have the answer.

Time Tested Design

- Classic style lid (hinged, flip-top)
- Welded handle
- Locking tab
- Strong, lightweight aluminum structure
- High strength neck tube
- Chemical vacuum retention system
- Spider design
- Advanced insulation system
- Five year warranty

ABS and MVE continue to supply you classic style, function, reliability and the newest technology in semen storage.

ABS... *Beyond Bulls* Added Benefits

ABS offers full service to help customers capture full value

By Kindra Gordon

In today's beef industry, the ultimate goal is to produce a quality beef product that earns favor with consumers around the globe – and brings them back eager for more. To achieve that goal of quality, consumer-sought-after beef, savvy beef producers recognize that it takes a commitment to being better – from better genetics to produce better beef products, to better information to assure global consumer concerns, to better marketing to capture the value of the cattle they've invested in.

Over the years, ABS and its team of representatives have evolved to assist producers in that quest of being better.

“Improving the beef you produce still starts with superior bull selection, but we've added more services to help people select, breed and market better cattle – that are hopefully more profitable cattle,” tells Larry Rowden, from Broken Bow, NE, who has been with ABS as a sales manager for thirty years.

Toward that effort, ABS not only offers superior genetics for A.I. – as they've done for the past 60 years, but has broadened their scope over the past decade to include several beef supply chain services to provide added benefits for their customers.

Among the menu of services offered by ABS include:

- Genetic selection advice
- Synchronization advice and services
- Artificial insemination services
- Age and source verification documentation
- Marketing assistance for feeder calves and replacement females

Rowden explains that each of these services can add efficiency and value for producers as they strive to produce better beef. “We have focused on finding representatives who can offer these professional services...ABS is dedicated to helping customers be successful,” adds Rowden.

Full Service Focus

From the field, ABS Representatives Adam Noble of Loma, CO and Travis Chrisman of Wauneta, NE, are testament to ABS's full service effort.

“I try to be a full service guy to my customers,” says Noble, who joined ABS in 2001 and operates Noble Genetics with his wife Jennifer. Their territory covers the entire western slope of Colorado where they will A.I. an average of 7,000 cows annually – and put on about 60,000 miles/year.

Noble's full service focus includes everything from selection advice to synchronization, A.I., verification and marketing assistance.

Larry Rowden, ABS District Sales Manager

Regarding selection he says, “About 80% of the time I still get producers asking for mating and selection input. Producers recognize that we know the bulls and see a lot of progeny.”

Additionally, Noble is in a region where brisket disease (also known as High Mountain Disease or Pulmonary Hypertension) is a concern. Thus he says, “We have a good idea on the bulls producers can use to avoid that risk, so our input is often sought for those selection decisions.”

Over the past nine years, Noble says he is also seeing an increasing interest in A.I. genetics. “Since 2001, we've tripled the amount of semen sold in this area,” he reports and attributes it to people liking the calves.

“Ninety-five percent of our business comes from commercial producers and they recognize the better genetics and the added value

Adam and Jennifer Noble, ABS Representatives in western Colorado

Continued on page 3

Nebraska ABS Representative Travis Chrisman discusses cattle with a customer

“Buyers want age and source verification and producers recognize that is essential to be eligible for premiums.”

– Travis Chrisman

they offer in the replacement females produced,” says Noble. He adds, “The steer calves produced are no throwaways either.”

Along with the interest in A.I. is growing demand for estrus synchronization services. Noble says, “Producers like the synchronization programs. It helps them maximize their time and labor over a couple days, and then the cows are bred to proven A.I. sires.”

Noble and his wife offer the gamut when it comes to synchronization services. “We can print out a calendar with the dates, times and products to guide them through implementing the synchronization program and then we do the A.I.-ing, or we can bring our saddle horses and be involved in the entire project. We’ve designed our services to be portable and are used to going into some pretty rugged country,” Noble says.

Travis Chrisman, with the assistance of his wife Kelli, operate Chrisman Cattle Services and offer similar selection, synchronization and A.I. services in Southwest Nebraska. Chrisman joined ABS in 2004 and will A.I. 5,000-8,000 head annually.

“This was a well-established territory and producers recognize the value of A.I. genetics,” Chrisman says. And, regarding heifers particularly he says, “It’s a lot safer bet to breed heifers to a proven A.I. bull – for calving ease, producing quality replacements or adding value if marketing bred heifers.”

Marketing Merit

Speaking of marketing, ABS has also put emphasis on helping their customers tap market opportunities, including

- providing age and source verification documentation to qualify for export eligibility,
- aligning with Big Blue Sale Barn (an internet-based video auction) where producers can sell feeder cattle, retain partial ownership or connect with a quality-minded feeder to retain full ownership,
- analysis and interpretation of feedlot performance and carcass data and
- offering heifer marketing outlets.

In Nebraska, Chrisman has seen a good response from producers to the marketing services offered. As one example, he says, “Buyers want age and source verification and producers recognize that is essential to be eligible for premiums.” Noble agrees.

ABS is USDA-approved to provide age and source verification services for cow-calf producers, grow yards and feedyards. The process must begin at the farm or ranch of origin and includes an on-site audit where a short list of questions must be answered to determine if the calves are eligible for age and source verification. If the calves

qualify, they will receive a program compliant tag and paperwork with documentation that will remain with them to the packing plant.

When producers are ready to market their calves, ABS can promote them through a private listing to a network of over 120 feedyards. Or, ABS Marketing Specialists are available to video the cattle, consign them to internet-based Big Blue Sale Barn and manage the weigh-up and shipping process. Big Blue Sale Barn holds an internet video auction every other week and specializes in age and source verified cattle suitable for branded beef and export programs.

Chrisman says the marketing aide offered by ABS has been especially helpful to smaller producers in his territory. “We are focused on helping producers add value through genetics, tapping the natural market or qualifying for export markets. So, for producers who sell calves off the cow at weaning or may background, this offers additional opportunities for them to connect with buyers and garner a profit.”

All total, Rowden says, “We recognize that marketing brings things full circle and allows producers to capture the value they’ve added to their calves.” And, he reiterates, “The goal of ABS through all of the services we offer is to help customers be successful.”

Mounting Evidence™ Without a Doubt.

ESTROTECT™ heat detectors are guaranteed* to perform as well or better than any tool on the market. Its scratch-off technology allows you to keep tabs on which cows are in standing heat more efficiently and effectively than competitive heat detectors.

Other heat detection methods cannot show evidence of multiple mountings without reapplying the product. With ESTROTECT, you only need to apply once per breeding cycle, and its different color varieties make it easier to manage your herd through its different breeding stages.

ESTROTECT has shown in recent trials to have greater than 90-percent accuracy when compared to vigorous visual observation and penile deviated bulls.

Don't settle for false positives: Choose a heat detection program that guarantees positive results.

Visit www.ESTROTECT.com to request your free sample of ESTROTECT and take the doubt out of heat detection.
