Great skin coverage and adhesion

Appropriate for use in organic farms

**Available in 200 and  
1000 litre units**

# Don't just take our word for it, find out what our customers have to say

## The Perrin family farm at E.A.R.L. du Landion

Paul and Clarisse with their daughter and their ABS representative Nicolas Depeige

- Farming in the Aube region of France with 55 cows
- Producing milk for cheese
- With a 10,000 litre per cow average
- No cases of clinical mastitis for 2 years
- Consistently low Somatic Cell Counts

**Paul Perrin has been a Valiant user for 3 years and has been using the new Ultra Formula for over 7 months.**

“Before we moved to Valiant we had a cell count of 200k – 220k cells and about 6 cases of clinical mastitis a year. We were looking for a hygiene product that could improve these results.

That was part of our motivation to use the Everyday: complete and effective protection at an affordable price. The use of the new formulation has made it possible to improve the health status of the herd further. We have now been at 80,000 cells for several weeks and feel well in control of mastitis too. Since using Valiant we have seen a real improvement in milk quality. Used through our robot, the spray is consistent and effective.

**We recommend this product!”**

## GAEC PETIT

- Farming in the Loiret region of France with 125 cows
- Milking through 2 Lely A5 robots

Benjamin Petit

We been using Valiant Everyday through our robots since 2015. The old version of Everyday matched our expectations, helping us almost halve our cell count. For five months we've been using the new version of Valiant Everyday with results that have always been in line with our objectives. We are satisfied with both its usage rates and its spray quality. We validate the new Valiant Everyday.”
